Sargent art sculpt it review

About a week ago I had several flat shapes to use as a jewelry charm from my bath air dry clay. They completely dried in about 2 days, which is about what I realized that they will need to dry (it would probably have a faster drying time or longer, depending on the prepared item, room temperature, etc.). However, binge feels often flip them so that they dry flat, only one really was dried flat. But for the most part they are all very active really. With some quick research, I found that I had to remember my art classes from high school when we worked with clay. No need to feel that I had a duh moment and at this point I am working to get a few more pieces, rolled out and cut to dry. I'm glad we're working in kiddo's bedroom and have some extra scraps of drywall laying around lol. This time I go sandwich between two pieces of drywall pieces and see how they dry that way. It may take a day longer, but we'll see how they turn out. So, in the meantime, I'm working on grinding pieces I've already made edges. Air dry clay that I use, sculpt it! according to Sargent Art, so far I am very pleased with the results. It is non-toxic, which is really nice, because I have a 4 year old son, 3 cats and 2 puppies who like to chew. So being non-toxic is necessary in my home. It has a pleasant smell when you handle it. I haven't tried to sculpt anything like numbers yet. But to make the basics of charm, it works perfectly. It is quite durable because it does a little effort to sand it on the smoothness I'm looking for. I use regular 100, 200, 220 grit sandpaper you will find in the hardware store. Grinding it goes pretty fast, which is nice because I like instant satisfaction many times. I haven't tried to use wet/dry sanding paper. But since it dries into ceramics as a texture, I think you could sand it with wet/dry stuff. I'm going to try that at some point because if I make actual figurines, I would really smooth the surface. When hand grinding, it produces very little dust, which makes it easy to clean. I noticed if my hands are a little dry, I don't have so much working time with it. But having a little bowl of water immerse my fingers in keeping the clay moist helps. As for the use of water to moisten, it's a little trial and error that it does not disappear when working with it. If you add a drop at the same time and work before adding more, that's not a problem. In general, I am very pleased with the product. ©2020 Walmart Stores, Inc.
